

# How to adjust the entry conveyor's height

# Step 1

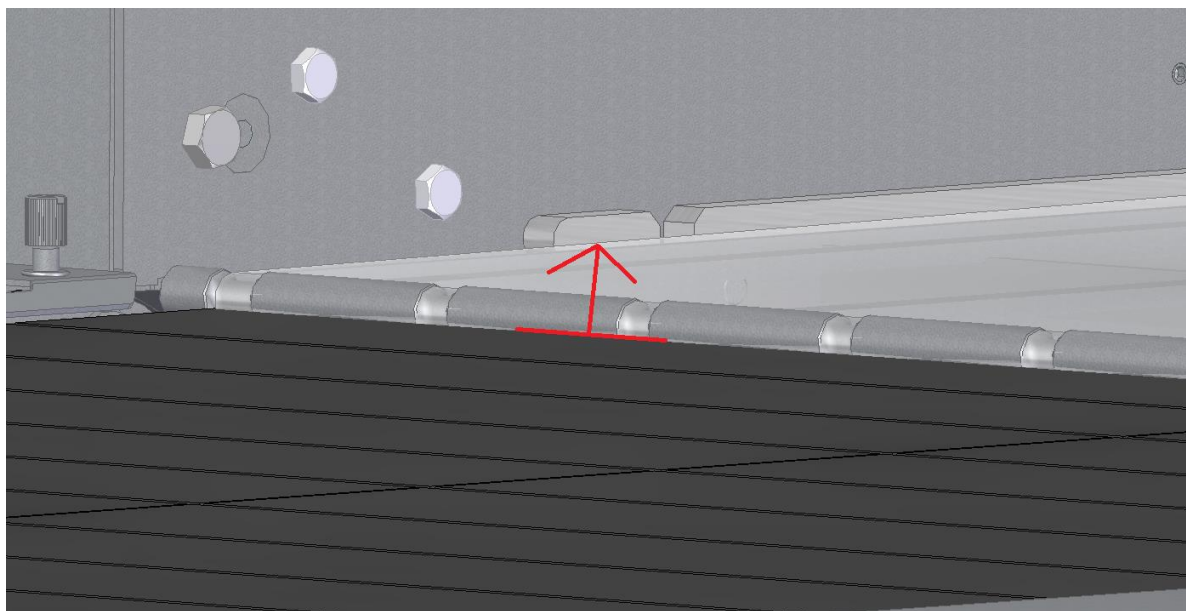

A) Locate the the entry conveyor.  
It is the one the product is layed on before cooking.

It reaches out over the stones slightly as opposed to the exit conveyor being flush with the stones.

B) Locate the adjustement screws.  
They will be on the side of the conveyor and about 8'' away from the stones.

## Step 2

A) Adjust higher

Turn each screw for an equal amount clockwise.

B) Adjust lower

Turn each screw for an equal amount counterclockwise.

The recommend height is about a finger's width or  $\frac{1}{2}$ ". It should not be rubbing against the stone.
